Agenda

- [x] Client meet up
- [ ] Trello setup & User Stories construction *
- [ ] Divide the work: 1. Frontend
  2. Backend
  3. Specifications setup — Nkateko willing to help
- [x] Need to define User Acceptance Tests
  - based on 4 user stories (minimum)

MERN (Javascript)

- Trello, Github Projects
- By "doing more" what did you mean?

User Story Construction Phase

1. Registration → Name, Email
2. Login & Authentication
3. Create stokvel group
4. Member onboarding and group management

Sikhona

First Case – first user.

- no role
- can create group
- can add members (sign-ups for once with no account)

Second Case – already in stokvel

- will sign into new group
- provided they got invitation

Nkateko (suggestion)

Registration

1. Given end-user is on sign-up page, When inserting credentials and authentication is valid, Then system should create an account and redirect them to login page.
2. If required fields are not inserted, error message
3. No duplicate account registration

Login & Authentication

1. Given a user is on the site and enters their credentials. When clicking the login button. Then the system should authenticate and if successful direct them to role-based dashboard.
2. Given a user is logging in and isn't registered. When clicking log in, then the system should return error message.
3. Given the user hasn't filled any details. When they click log in, Then the system should ask for required fields.

Stokvel Group

Given
